Material Test Certificates

At the time of order, our customers shall specify the type of Material Test Certificates (MTC) they want to receive with the material. EN 10204 defines the different types of document that can be provided.

The table below presents the differences between the different types of Inspection Document:

Types of Documents	Types of Testing	Conformity of the material	Test Result	Validation
Certificate 2.1	Non-specific*	Mentioned	Not included	Manufacturer
Certificate 2.2	Non-specific*	Mentioned	Non-specific* test included	Manufacturer
Certificate 3.1	Specific*	Mentioned	Specific* test included	Manufacturer authorized Representative
Certificate 3.2	Specific*	Mentioned	Specific* test included	Manufacturer authorized Representative + Purchaser authorized Representative

*Specific: inspection carried out on the product to be supplied, according to the product specifications.

Non-specific: inspection carried out on products with the same specifications and the same manufacturing process but not necessarily the products supplied.

ASTM A6 defines one type of MTC where the conformity of the material and the specific testing results shall be stated.

We hope the present declaration will help you.

For any further information/clarification, please feel free to contact us.
